a first U-joint connectable with a steering wheel of the vehicle;

a first shaft pivotally attached to said first U-joint and rotatable about a longitudinal axis of said first shaft upon rotation of said first U-joint;

a second shaft drivingly connected to said first shaft and having a slip joint connection with said first shaft permitting relative axial movement of said first and second shafts while maintaining a rotary drive connection between said first and second shafts;

a second U-joint pivotally attached to said second shaft and connectable with a steering mechanism of the vehicle; and

said first shaft comprising first and second shaft parts and a quick disconnect joint between said first and second shaft parts permitting disconnection of said first and second shaft parts and pivoting of said first shaft part relative to said first U-joint to a first out of the way position and pivoting of said second shaft and said second shaft part relative to said second U-joint to a second out of the way position.

Please add claims 9 and 10, as follows:

9. An intermediate steering column as defined in claim
1 wherein said quick disconnect joint includes a releasable
fastener which, when released, permits disconnection of said
